Re: Successful integration of myCondo's Condominium Management System to Realtimme Cloud via APIs

MyCondo develops Software-as-a-Service (Saas) with applications that help management save money, time and human resources.

Integrating to Realtimme's Accounting solution is the best holistic approach we have taken to provide a total solution for condominium management in Singapore.

We started our project with Realtimme in early 2017 with design and system flow to relevant APIs including MCST Management Fund Billing and Facilities Booking Fees which we completed our testing successfully during end of year 2018.

We are very happy that both our systems are integrated and now ready for the market.

Thank you for your attention.
